

Special Feature 2

Initiatives for New Technologies

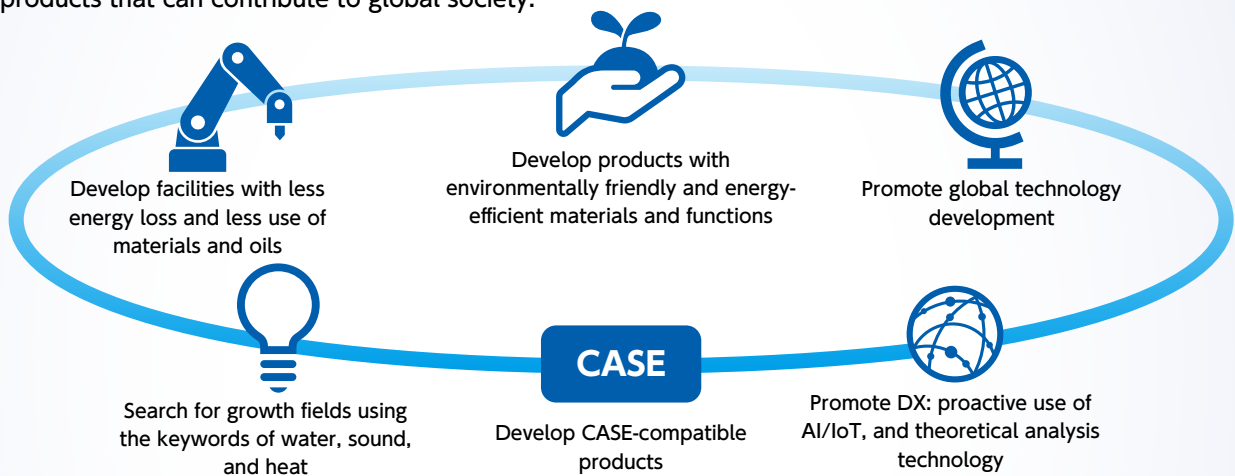

As epitomized by the term “decarbonized society”, we must address the changes in the global environment and the significant technological challenges that will follow.

The DAIDO METAL GROUP has also turned its gaze on these technological challenges, and is developing technologies and products to contribute to global society.

Based on the Group’s core technologies and global research and development structure, in addition to strengthening current business lines further we will work to create and foster business lines in new fields.

Technology development policy

The DAIDO METAL GROUP will make maximum use of its core technologies to develop technologies and products that can contribute to global society.

New product development strategy (create/foster new business lines)

* Physical Vapor Deposition, a technology used in the surface treatment of metals
